1 Introduction

This document describes basic test information for Profile Manager. It documents the test tools needed, how to set up the environment for various tests, and the procedure for testing. It also specifies the test cases for basic test.

After reading this document, you will know how to set up, execute and document a basic test for this product.

Note: if you choose to renumber the test cases in this document, you will need to renumber also the test cases in the BTR accordingly.

2 Test Tools

Since there are no manual test cases (only automated) in the Profile Manager basic tests, there is no need for any test tools.

3 Test Environment

In order to run the basic tests, the following environment variables must be set:

- JAVA_HOME pointing to a Java 1.5 installation
- COBERTURA_HOME pointing to a Cobertura installation

The *mtest* folder contains automated test cases that depend on external resources, in this case a messages store (MS). In order to run the basic tests in the *mtest* folder, the configuration file *test.xml* must contain parameters for a valid MS host and greeting administrator.

4 Test Execution

This section specifies how to execute the Profile Manager basic tests.

4.1 Automated Test Cases

4.1.1 Test Documentation

The test cases are documented in the source code using javadoc.

4.1.2 Test Location

The automated test cases can be found here:

```
/vobs/ipms/mas/profilemanager/test
```

and here:

```
/vobs/ipms/mas/profilemanager/mtest
```

4.1.3 Execute Tests

Run the automated test cases in the *test* directory using the ant target *runtest*.

Check test case coverage using the ant target *runcoverage*.

To also include the automated test cases in the *mtest* directory use the ant target *runtest* or *runcoverage* with the parameter *-Dmtest=*.

5 Test Cases

There are no manual test cases for Profile Manager. All basic tests are automated.

6 Reporting Test Results

The test results are printed to stdout when executing the test cases.
